## AIRSOFT GUN REVIEWS

USPSA Division – Limited/L10

**Maker** – TM

**Model** – 5.1 hi-cap

**Pistol weight** – 32 oz with mag inserted

**Frame** – metal short dust cover with rail

**Slide** – plastic rear cocking serrations

**Outer Barrel** – plastic bull barrel

**Sights** – white dot front adjustable rear

**Safeties** – ambi

**Grip** – textured plastic like sv style

**Trigger weight** – 2 ½ pounds

**Holster** - DOH and DAA race master

**Accuracy** – 1 group, 5 shot group at 15 feet from rest

**Chrono** – (Mag temp warm) (**BB weight .20**) 326fps, 326fps, 325fps, average 326fps

**Magazines** – metal 140mm style

**Magazine feed lips** – plastic

**Magazine filling** – works great with bb loader

**Ammunition** – .20 or .25 bb's work great

**Maintenance** – wipe down regularly to remove any dust or build up. Inspect all rubber seals for wear on pistol and magazine. Lubricate with 100% use silicone oil (not petroleum based).

**Break down** – slid stop take down

**Aftermarket parts** – a million, fiber optic front sight, magwells, metal slides, alternate grips, springs, metal outer barrels, whole top ends

**Pros** – high quality, very snappy with green gas (made for top gas), lots of aftermarket support. It is what most of the high end open/custom guns are made from.

**Cons** – plastic slide, weight, grip is not checkered like most common limited guns

**Summary** – TM's are by the best out of the box airsofts. This will satisfy your training needs using airsoft for USPSA training

**Reviewer** – Burt
